

## AbitMORE SCM Reporting - Highlights

- [<Solutions>](#) |
- [<CMN/ZMF Reporting>](#)

- Create and distribute powerful custom and ad-hoc reports or graphics about real-time and/or archived ChangeMan ZMF data related to packages, components and events.
- Includes typical reporting features like logical and/or DB2-like operators to select the desired data, sorting and grouping of data, summary reports only, etc.
- Reporting output can be formatted as a traditional reports or in CSV format that can be processed by a CSV compliant application (e.g. to create graphics from it).
- The reports may be further automated by report variables like user id, reporting date, reporting time, etc, which may be used to create libraries of reports used by different users.
- May be used as an alternative in situations where currently available CMN/XML services fail today (e.g. to process huge volumes, or to report about data for which no appropriate XML service exists).

- Includes an online storage facility for aged ChangeMan ZMF information, which reduces storage requirements (CMNPMAST) dramatically and which enhances overall ChangeMan ZMF performance.
- Bi-directional interface with [AbitMORE SCM Commander](#).
- Reports can be kept online or transmitted to the user's workstation.
- Reports can be scheduled for automatic execution (daily, weekly, monthly, etc.), e.g. as part of daily housekeeping procedures and/or via job scheduling systems.
- Shipped with a catalog (solution packs) of about 150 [standard report solutions](#) for multiple target audiences (users).
- Intuitive user interface that does not require any programming language skills.
- Easy installation of the software (a matter of minutes), no need for extensive user training.
- Compliant with all supported G.A. releases of ChangeMan ZMF.
