AbitMORE SCM Commander - Highlights

- <u><Solutions></u> |
- <u><XML services in CMN/ZMF></u>

- Do more with less, quickly and securely, without the traditional learning curve or expertise normally required for XML and advanced ChangeMan ZMF customizations.
- Extend ChangeMan ZMF's functionality with little-to-no training or customization.
- Front-end to XML services, including extensive search facilities, output formatting capabilities and online request/result tag documentation.
- Mass execution of any XML service, including special features related to error handling and workload balancing towards the ChangeMan ZMF started task.
- JCL can be saved and then scheduled for daily, weekly, or monthly execution.
- Intuitive user interface.
- Code generation features allow for rapid development of XML applications and simplify future ChangeMan ZMF release upgrade efforts.
- Bi-directional interface with <u>AbitMORE SCM Reporting</u>.
- Using the ASC-administration facility, any XML service or ASC solution can be completely secured via your own security system, alternatively enabled or disabled.
- Little or no training or customization required.
- Thorough set of XML based <u>ready to use solutions</u> shipped with ASC to get you up and running right away.
- Compliant with all supported G.A. releases of ChangeMan ZMF.
