

## Bill of material to audit IDMS/ADSO components

- [<Solutions>](#) |
- [<IDMS/ADSO in CMN/ZMF>](#)

The batch job that ChangeMan ZMF submits at the end of a checkin request for an IDMS/ADSO component, performs all sorts of processing to prepare for the migration of the IDMS/ADSO component to test- and/or production areas later on. Part of this processing relates to producing the **bill of material** for the IDMS/ADSO component being processed. The screen-print here shows such bill of material for an IDMS/ADSO dialog.

***** Bottom of data *****				

This bill of material is used within AbitMORE SCM for IDMS/ADSO for all sorts of audit and/or impact analysis processing.

**Note:** the technique used here is a sample of how AbitMORE implements (for many years already) "user defined relationships" in ChangeMan ZMF, a commonly known enhancement request for ChangeMan ZMF. This request was initially submitted by "us" back in ... 1991(during the first ChangeMan ZMF global user conference ever, in the famous [Fairmont hotel in San Francisco](#)). In the user voting it ended up then as nr 11 (on the top 100 of enhancement requests for ChangeMan ZMF) ... and selective backout was nr 1 on the list. Both requests are still outstanding as of today. The technique itself may get published some day in [Dr. Chgman's Z-Wiki](#) ...
