

&It;XML services in CMN/ZMF>

Change the creator Id of a package

Summary: Change the creator ID of a change package to another userid, something that is typically done for none-BAS packages created by somebody who left the company. Read more »

Solution Variables:

```
ASC1 - AbitMORE® SCM Commander 1.4.1 ------
       > CMN/ZMF Solutions > Change the creator id of a package
                                                            Scroll => CS
Command =>
Update the creator id of a package
Execution options
 Trace..... N
                            N=No trace, Y=Rexx trace, X=Xml trace
 CMN/ZMF subsys..: T
                            CMN/ZMF subsystem ID
Target selection
 Package id.....: DEMO000123 Appl Id and package nr
Processing values (new)
 New creator....: SOMEUSER Userid of the package creator
 Press <ENTER> to process, <END> to return
```

Update install date for all expired packages (limbo)

Summary: Mass update the planned install date of all change package with "install date passed" to the new (future) install date. Read more »

Solution Variables:

```
ASC1 - AbitMORE® SCM Commander 1.4.1 ------
       > CMN/ZMF Solutions > Update install date for all expired pkgs (limbo)
Command =>
Extend the date of packages in Limbo
 Execution options
 Trace....:
                            N=No trace, Y=Rexx trace, X=Xml trace
 CMN/ZMF subsys..:
                            CMN/ZMF subsystem ID
 Execute/Simulate: N
                            Y=Execute or N=Simulate only
 View JCL..... N
                            View JCL before submit (Y/N)
Target selection
                            Application mask ( * for all applications)
 Application....: *____
Processing values
 Install date ....: 20120912 New install date in format YYYYMMDD
 Press <ENTER> to process, <END> to return
```

AbitMORE SCM Commander - Solutions

AbitMORE SCM Commander's solution center is a set of ISPF dialogs (ASC solutions) to perform various CMN/ZMF tasks, and this via all sorts of XML services that are executed from within those dialogs. These XML services are hidden within the ASC solutions (and/or the batchjob that may get submitted to complete a request), so that the users of these solutions do not have to know anything about using XML services.

The need for these ASC solutions seem to exist at many CMN/ZMF customers. Each of them have been developed starting from real world needs, e.g. within the context of a CMN/ZMF helpdesk project where many of these solutions have proven to be very helpful. Read more »

I get a S069 abend when running a lot of XMLs, what's wrong?

To understand what's happening, just submit an XML request to recreate the XNODE dataset (like online command "F5"), and this for enough (like a few hundreds?) of packages. Read more »

How can I reuse the output of an XML service as input for a new one?
